

TABLE OF CONTENTS

FOREWORD	iii
TASK FORCE	iv
NOTICE TO USERS	v
TABLE OF CONTENTS	vii
 CHAPTER 1 INTRODUCTION	
1.1 INTRODUCTION TO TAB WORK	1.1
1.2 THE TAB TECHNICIAN/TEAM	1.1
1.3 GENERAL REQUIREMENTS	1.2
 CHAPTER 2 HVAC FUNDAMENTALS	
2.1 HEAT FLOW	2.1
2.2 PSYCHROMETRICS	2.6
2.3 FLUID MECHANICS	2.19
 CHAPTER 3 ELECTRICAL EQUIPMENT AND CONTROLS	
3.1 ELECTRICAL SYSTEMS	3.1
3.2 ELECTRICAL SERVICES	3.1
3.3 TRANSFORMERS	3.5
3.4 MOTORS	3.5
3.5 MOTOR CONTROLS	3.8
3.6 VARIABLE FREQUENCY DRIVES	3.9
 CHAPTER 4 TEMPERATURE CONTROL	
4.1 AUTOMATIC TEMPERATURE CONTROL SYSTEMS	4.1
4.2 CONTROL LOOPS	4.2
4.3 CONTROL DIAGRAMS	4.5
4.4 CONTROL RELATIONSHIPS	4.5
4.5 ATC SYSTEM ADJUSTMENT	4.6
4.6 TAB/ATC RELATIONSHIP	4.6
4.7 CENTRALIZED CONTROL SYSTEMS	4.7
 CHAPTER 5 FANS	
5.1 FAN CHARACTERISTICS	5.1
5.2 FAN CONSTRUCTION	5.4
5.3 FAN AIRFLOW AND PRESSURES	5.10
5.4 FAN/SYSTEM CURVE RELATIONSHIP	5.13
5.5 FAN CAPACITY RATINGS	5.17
 CHAPTER 6 AIR DISTRIBUTION AND DEVICES	
6.1 AIR TERMINAL BOXES	6.1
6.2 VARIABLE AIR VOLUME (VAV) TERMINAL BOXES	6.3
6.3 OTHER AIRFLOW DEVICES	6.3
6.4 AIR DISTRIBUTION BASICS	6.6
6.5 ROOM AIR DISTRIBUTION	6.9

CHAPTER 7	AIR SYSTEMS	
7.1	INTRODUCTION	7.1
7.2	TYPES OF AIR SYSTEMS	7.2
7.3	AIR SYSTEM DESIGN	7.9
7.4	DUCT SIZING EXAMPLES	7.11
7.5	SUMMARY	7.14
CHAPTER 8	HYDRONIC EQUIPMENT	
8.1	PUMPS	8.1
8.2	PUMP / SYSTEM CURVE RELATIONSHIP	8.7
8.3	PUMP INSTALLATION CRITERIA	8.11
8.4	HYDRONIC HEATING AND COOLING SOURCES	8.13
8.5	TERMINAL HEATING AND COOLING UNITS	8.14
CHAPTER 9	HYDRONIC SYSTEMS	
9.1	HYDRONIC SYSTEMS	9.1
9.2	HYDRONIC SYSTEM DESIGN	9.8
9.3	HYDRONIC DESIGN PROCEDURES	9.13
9.4	STEAM SYSTEMS	9.14
CHAPTER 10	REFRIGERATION SYSTEMS	
10.1	REFRIGERATION SYSTEMS	10.1
10.2	REFRIGERATION TERMS AND COMPONENTS	10.2
10.3	SAFETY CONTROLS	10.4
10.4	OPERATING CONTROLS	10.4
10.5	REFRIGERANTS	10.4
10.6	THERMAL BULBS AND SUPERHEAT	10.4
10.7	COMPRESSOR SHORT CYCLING	10.6
CHAPTER 11	TAB INSTRUMENTS	
11.1	INTRODUCTION	11.1
11.2	AIRFLOW MEASURING INSTRUMENTS	11.1
11.3	PRESSURE GAGE, CALIBRATED	11.9
11.4	ROTATION MEASURING INSTRUMENTS	11.12
11.5	TEMPERATURE FUNCTION TACHOMETER MEASURING INSTRUMENTS	11.16
11.6	ELECTRICAL MEASURING INSTRUMENTS	11.22
11.7	COMMUNICATION DEVICES	11.23
11.8	HYDRONIC FLOW MEASURING DEVICES	11.24
CHAPTER 12	PRELIMINARY TAB PROCEDURES	
12.1	INITIAL PLANNING	12.1
12.2	CONTRACT DOCUMENTS	12.1
12.3	SYSTEM REVIEW AND ANALYSIS	12.2
12.4	THE AGENDA	12.4
12.5	PLANNING FIELD TAB PROCEDURES	12.5
12.6	PRELIMINARY FIELD PROCEDURES	12.6
CHAPTER 13	GENERAL AIR SYSTEM TAB PROCEDURES	
13.1	BASIC FAN TESTING PROCEDURES	13.1
13.2	SYSTEM STARTUP	13.1
13.3	FAN TESTING	13.1
13.4	DEFICIENCY REVIEW	13.2
13.5	RETURN AND OUTSIDE AIR SETTINGS	13.2
13.6	ANALYSIS OF MEASUREMENTS	13.3
13.7	RECORDING DATA	13.3

13.8	PROPORTIONAL BALANCING (RATIO) METHOD	13.3	
13.9	PERCENTAGE OF DESIGN AIRFLOW	13.3	
13.10	SYSTEM AIRFLOW	13.5	
13.11	BASIC OUTLET BALANCING PROCEDURES	13.5	
13.12	STEPWISE METHOD	13.5	
13.13	FAN ADJUSTMENT	13.6	
13.14	WET COIL CONDITIONS	13.6	
13.15	AIRFLOW TOTALS	13.6	
13.16	EXHAUST FANS	13.6	
13.17	FAN DRIVE ADJUSTMENT	13.6	
13.18	DAMPER ADJUSTMENTS	13.7	
13.19	DUCT TRAVERSES	13.7	
13.20	SYSTEM DEFICIENCIES	13.7	
13.21	FUME HOOD EXHAUST BALANCING PROCEDURES	13.7	
13.22	DUST COLLECTION AND EXHAUST BALANCING PROCEDURES	13.8	
13.23	AIR FLOW MEASUREMENTS ON DISCHARGE STACKS	13.11	
13.24	INDUSTRIAL VENTILATION	13.12	
13.25	SELECTION OF INSTRUMENTS	13.12	
 CHAPTER 14 TAB PROCEDURES FOR SPECIFIC AIR SYSTEMS			
14.1	INTRODUCTION	14.1	
14.2	VARIABLE AIR VOLUME (VAV) SYSTEMS	14.1	
14.3	MULTI-ZONE SYSTEMS	14.13	
14.4	INDUCTION UNIT SYSTEMS	14.14	
14.5	DUAL DUCT SYSTEMS	14.14	
14.6	SPECIAL EXHAUST AIR SYSTEMS	14.16	
14.7	PROCESS EXHAUST AIR SYSTEMS	14.17	
 CHAPTER 15 HYDRONIC SYSTEM TAB PROCEDURES			
15.1	HYDRONIC SYSTEM MEASUREMENT METHODS	15.1	
15.2	BASIC HYDRONIC SYSTEM PROCEDURES	15.3	
15.3	PIPING SYSTEM BALANCING	15.4	
15.4	BALANCING SPECIFIC SYSTEMS	15.5	
15.5	VARIABLE VOLUME FLOW	15.9	
15.6	PRIMARY-SECONDARY SYSTEMS	15.11	
15.7	SUMMER-WINTER SYSTEMS	15.11	
 CHAPTER 16 TAB REPORT FORMS			
16.1	PREPARING TAB REPORT FORMS	16.1	
16.2	DESCRIPTION OF USE	16.1	
 APPENDIX A DUCT DESIGN TABLES & CHARTS			
	DUCT DESIGN TABLES AND CHARTS	A.1	
	HVAC EQUATIONS - (I-P)	A.31	
	HVAC EQUATIONS - (SI)	A.35	
	SI UNITS AND EQUIVALENTS	A.39	
	SOUND DESIGN EQUATIONS	A.41	
	FITTING EQUIVALENTS (WATER)	A.43	
	PROPERTIES OF STEAM	A.44	
	STEAM PIPING (I-P)	A.45	
	STEAM PIPING (SI)	A.49	
	REFERENCES	A.54	
 GLOSSARY			G.1
 INDEX			I.1

TABLES

5-1	Typical Fan Rating Table	5.7
6-1	Typical Ratios of Damper to System Resistance for Flow Characteristic Curve	6.6
6-2	Guide to Use of Various Outlets	6.12
6-3	Recommended Return Air Inlet Face Velocities	6.14
6-4	Air Outlets and Diffusers Total Pressure Loss Average—in. wg (Pa)	6.15
6-5	Supply Registers Total Pressure Loss Average—in. wg (Pa)	6.15
6-6	Return Registers Total Pressure Loss Average—in. wg (Pa)	6.15
8-1	Characteristics of Centrifugal Pumps	8.3
8-2	Characteristics of Common Types of Pumps	8.3
8-3	Flow vs Total Head (Cooling Tower Application)	8.11
9-1	Hydronic Trouble Analysis Guide	9.8
11-1	Airflow Measuring Instruments	11.9
11-2	Instruments for Hydronic Balancing	11.11
11-3	Hydronic Measuring Instruments	11.11
11-4	Rotation Measuring Instruments	11.13
11-5	Instrumentation for Air & Hydronic Balancing	11.16
11-6	Instruments for Air Balancing	11.17
11-7	Temperature Measuring Instruments	11.21
15-1	Load-Flow Variations	15.10
A-1	Duct Material Roughness Factors	A.3
A-2	Circulation Equivalents of Rectangular Ducts for Equal Friction and Capacity (I-P) (2) Dimensions in Inches	A.5
A-2	Circulation Equivalents of Rectangular Ducts for Equal Friction and Capacity (I-P) (2) Dimensions in Inches (continued)	A.6
A-3	Circular Equivalents of Rectangular Ducts for Equal Friction and Capacity (SI) (2) Dimensions in mm	A.7
A-3	Circular Equivalents of Rectangular Ducts for Equal Friction and Capacity (SI) (2) Dimensions in mm (continued)	A.8
A-4	Velocities/Velocity Pressures (I-P)	A.9
A-5	Velocities/Velocity Pressures (SI)	A.10
A-6	Angular Conversion	A.10
A-7	Loss Coefficients for Straight-Through Flow	A.11
A-8	Recommended Criteria for Louver Sizing	A.12
A-9	Typical Design Velocities for Duct Components	A.13
A-10	Elbow Loss Coefficients	A.14
A-11	Transition Loss Coefficients	A.17
A-12	Rectangular Branch Connection Loss Coefficients	A.19
A-13	Round Branch Connection Loss Coefficients	A.23
A-14	Miscellaneous Fitting Coefficients	A.27
	HVAC Equations (I-P)	A.31
A-15	Converting Pressure In Inches of Mercury to Feet of Water at Various Water Temperatures	A.33
A-16	Air Density Correction Factors (I-P)	A.34
	HVAC Equations (SI)	A.35
A-17	Air Density Correction Factors (SI)	A.38
A-18	SI Units And Equivalents	A.39
A-19	SI Equivalents	A.40
A-20	Sound Design Equations	A.41
A-21	Equivalent Length in Feet of Pipe for 90° Elbows	A.43
A-22	Equivalent Length in Meters of Pipe for 90° Elbows	A.43
A-23	Iron and Copper Elbow Equivalents	A.43
A-24	Properties of Saturated Steam (I-P)	A.44
A-25	Properties of Saturated Steam (SI)	A.44
A-26	Steam Piping (I-P) Flow Rate of Steam in Schedule 40 Pipe at Initial Saturation Pressure of 3.5 and 12 psig (Flow Rate expressed in Pounds per Hour)	A.45

TABLES (continued)

A-27	Comparative Capacity of Steam Lines at Various Pitches for Steam and Condensate Flowing in Opposite Directions (Pitch of Pipe in Inches per 10 Feet – Velocity in Feet per Second)	A.45
A-28	Pressure Drops In Common Use for Sizing Steam Pipe (For Corresponding Initial Steam Pressure)	A.46
A-29	Length in Feet of Pipe to be Added to Actual Length of Run — Owing to Fittings — to Obtain Equivalent Length	A.46
A-30	Steam Pipe Capacities for Low Pressure Systems (For Use on One-Pipe Systems or Two-Pipe Systems in which Condensate Flows Against the Steam Flow)	A.47
A-31	Return Main and Riser Capacities for Low-Pressure Systems—Pounds per Hour (Reference to this table will be made by column letter G through V)	A.48
A-32	Flow Rate in kg/h of Steam in Schedule 40 Pipe at Initial Saturation Pressure of 15 and 85 kPa Above Atmospheric	A.49
A-33	Comparative Capacity of Steam Lines at Various Pitches for Steam and Condensate Flowing in Opposite Directions	A.49
A-34	Equivalent Length of Fittings to be Added to Pipe Run	A.50
A-35	Steam Pipe Capacities for Low-Pressure Systems (For Use on One-Pipe Systems or Two-Pipe Systems in which Condensate Flows Against the Steam Flow)	A.51
A-36	Return Main and Riser Capacities for Low-Pressure Systems — kg/h	A.52

FIGURES

2-1	Heat Transfer by Conduction and Radiation	2.2
2-2	Convection Heat Transfer	2.2
2-3	Counterflow Airstreams	2.3
2-4	Parallel Flow Airstreams	2.3
2-5	Cross-flow Airstreams	2.4
2-6	Parallel and Counterflow Heat Transfer Curves	2.4
2-7	Psychrometric Chart (I-P)	2.9
2-8	Psychrometric Chart - Typical Condition Points (SI)	2.10
2-9	Psychrometric Chart - Typical Condition Points	2.11
2-10	Sensible Heating and Cooling (I-P)	2.12
2-11	Humidification and Dehumidification (I-P)	2.13
2-12	Psychrometric Chart - Processes	2.14
2-13	Cooling and Dehumidifying (I-P)	2.15
2-14	Heating and Humidification	2.15
2-15	Mixing of Two Airstreams (SI)	2.17
2-16	Tank Static Head	2.20
2-17	Velocity Profile	2.21
2-18	Pressure Changes During Flow in Ducts	2.22
2-19	Sample Fitting Loss Coefficient Table	2.24
2-20	Pump with Static Head and Suction Head	2.28
2-21	Pump with Suction Lift	2.29
3-1	Series-Parallel Circuit	3.2
3-2	Single-Phase AC Service	3.2
3-3	Current And Voltage-Time Curves and Power Factor	3.3
3-4	220-Volt Three-Wire Delta Three-Phase Circuit	3.4
3-5	220-Volt Delta Three-Phase Circuit with 110-Volt Single-Phase Supply	3.4
3-6	120/208-Volt Four-Wire Wye Circuit	3.4
3-7	Transformer with Tapped Secondary	3.5
3-8	Typical Performance of Standard Squirrel Cage Induction Motors	3.7
3-9	Interlocked Starters with Control Transformers	3.9
3-10	VFD Added to Existing Air Handling Unit	3.10
4-1	Valve Throttling Characteristic Comparison	4.3
4-2	ATC Valve Arrangements	4.4
4-3	Typical Multiblade Dampers	4.4
4-4	Desktop Computer Displaying Status of Building HVAC Systems	4.7
4-5	Functional Block Diagram A Centralized Computer Control System	4.8
4-6	HVAC Controls Panel with Original Pneumatic Controls.	4.9
4-7	The Same HVAC Control Panel After Upgrading to Direct Digital Control (DDC).	4.10
4-8	Portable Computer Plugged Into Electronic Wall Thermostat During System Balancing.	4.10
5-1	Centrifugal Fan Components	5.1
5-2	Characteristic Curves for FC Fans	5.1
5-3	Characteristic Curves for BI Fans	5.2
5-4	Characteristic Curves for Air Foil	5.2
5-5	Axial Fan Components	5.2
5-6	Characteristic Curves for Propeller Fans	5.3
5-7	Characteristic Curves for Vaneaxial Fans (High Performance)	5.3
5-8	Tubular Centrifugal Fan	5.3
5-9	Characteristic Curves for Tubular Centrifugal Fans	5.4
5-10	Fan Class Standards (I-P) (SW BI Fans)	5.4
5-11	Fan Class Standards (SI) (SW BI Fans)	5.4
5-12	Drive Arrangements For Centrifugal Fans	5.5
5-13	Arrangement 1 In-Line Fans	5.8
5-14	Arrangement 4 in-line fans	5.9
5-15	Arrangement 9 in-Line fans	5.9
5-16	Centrifugal Fan Motor Locations	5.10
5-17	Direction of Rotation And Discharge	5.11

FIGURES (continued)

5-18	Fan Total Pressure (TP)	5.12
5-19	Fan Static Pressure (SP)	5.12
5-20	Fan Velocity Pressure (VP)	5.13
5-21	Tip Speed	5.13
5-22	System Resistance Curve	5.14
5-23	Operating Point	5.14
5-24	Variations from Design Air Shortage	5.15
5-25	Fan Law - RPM Change	5.15
5-26	Effect of Density Change (Constant Volume)	5.16
5-27	Effect of Density Change (Constant Static Pressure)	5.17
5-28	AMCA Fan Test - Pitot Tube	5.18
5-29	Effect of Density Change (Constant Mass Flow)	5.18
5-30	Effects of System Effect	5.19
5-31	Fan Outlet Effective Duct Length	5.20
5-32	Non-Uniform Flow Conditions Into Fan Inlet	5.20
6-1	Constant Volume Fan-Powered Box	6.2
6-2	Bypass-Type Fan-Powered Box	6.3
6-3	Multiblade Volume Dampers	6.4
6-4	Flow Characteristics for a Parallel Operating Damper	6.5
6-5	Flow Characteristics for an Opposed Operating Damper	6.6
6-6	Volume Dampers	6.7
6-7	Surface (Coanda) Effect	6.8
6-8	Some Elements Affecting Body Heat Loss	6.10
6-9	Four Zones in Jet Expansion	6.11
6-10	Typical Supply Outlets	6.12
7-1	Single Duct System	7.3
7-2	Typical Equipment for Single Zone Duct System	7.3
7-3	Variable Air Volume (VAV) System	7.4
7-4	Terminal Reheat System	7.5
7-5	Induction Reheat System	7.6
7-6	Dual Duct High Velocity System	7.7
7-7	Multi-Zone System	7.8
7-8	System Layout (I-P Units)	7.11
7-9	System Layout (SI)	7.12
7-10	Fan Duct Connections	7.14
8-1	Typical Centrifugal Pump Cross Section	8.1
8-2	Descriptions of Centrifugal Pumps Used in Hydronic Systems	8.2
8-3	Coupling Alignment with Straight Edge	8.4
8-4	Typical Required NPSH Curve	8.6
8-5	Pump Curve for 1750 rpm Operation	8.7
8-6	Typical Design Pump Selection Point (from Abbreviated Curve)	8.8
8-7	System Curve Plotted on Pump Curve	8.8
8-8	Typical Open Systems	8.9
8-9	Typical Cooling Tower Application	8.9
8-10	System Curve for Open Circuit False Operating Point	8.9
8-11	System Curve for Open Circuit True Operating Point	8.10
8-12	Pump Operating Points	8.10
8-13	Multiple Pumps	8.11
8-14	Pump and System Curves for Parallel Pumping	8.11
8-15	Pump and System Curves for Series Pumping	8.12
8-16	Gage Location	8.12
8-17	Relative Gage Elevations	8.12
8-18	Effect of Viscosity	8.13
9-1	A Series Loop System	9.2
9-2	A One-Pipe System	9.2
9-3	Direct Return Two-Pipe System	9.3
9-4	Reverse Return Two-Pipe System	9.3
9-5	Example of Primary and Secondary Pumping Circuits	9.4
9-6	Return Mix System Room Unit Controls	9.5

FIGURES (continued)

9-7	Four Pipe System Room Unit	9.5
9-8	Boiler Piping for a Multiple-Zone, Multiple-Purpose Heating System	9.7
9-9	Water Cooled Condenser Connections for City Water	9.12
9-10	Cooling Tower Piping System	9.13
9-11	Basic Piping Circuits for Gravity Flow of Condensate	9.14
9-12	Basic Piping Circuits for Mechanical Return Systems	9.16
9-13	Typical Two-Pipe Vacuum Steam System	9.16
9-14	Thermostatic Trap	9.17
9-15	Inverter Bucket Trap	9.17
9-16	Float and Thermostatic Trap	9.18
9-17	Typical Connections to Finned Tube Heating Coils	9.18
10-1	Refrigerant Cycle	10.2
10-2	Locations of Thermal Bulbs	10.5
11-1	U-Tube Manometer Equipped with Over-Pressure Traps	11.1
11-2	Inclined-Vertical Manometer	11.2
11-3	Electronic/Multi-meter	11.2
11-4	Pitot Tube Connections	11.3
11-5	Pitot Tube	11.4
11-6	Magnehelic Gage	11.5
11-7	Rotating Vane Anemometer	11.6
11-8	Electronic Analog Rotating Vane Anemometer	11.6
11-9	Deflecting Vane Anemometer Set	11.7
11-10	Thermal Anemometer	11.7
11-11	Flow Measuring Hood	11.8
11-12	Calibrated Pressure Gages	11.10
11-13	Single Gage Being Used to Measure a Differential Pressure	11.12
11-14	Single Gage Being Used to Measure a Differential Pressure	11.12
11-15	Differential Pressure Gage	11.13
11-16	Chronometric Tachometer	11.14
11-17	Digital Optical Tachometer	11.14
11-18	Digital Contact Tachometer	11.15
11-19	Stroboscope	11.15
11-20	Multi-range, Dual Function (Optical/Contact Tachometer)	11.15
11-21	Glass Tube Thermometers	11.18
11-22	Dial Thermometer	11.18
11-23	Thermocouple	11.19
11-24	Thermistor Thermometer	11.19
11-24	Infrared Digital Thermometer	11.19
11-26	Resistance Temperature Detector	11.20
11-27	Electronic Thermometer	11.20
11-28	Sling Psychrometer	11.22
11-29	Digital Psychrometer	11.22
11-30	Thermohygrometer	11.23
11-31	Clamp-on Volt Ammeter	11.23
11-32	Accessing Automation System with Laptop Computer	11.24
11-33	Orifice as a Measuring Device	11.25
11-34	Flow Meter Types	11.26
11-35	Annular Flow Indicator	11.26
11-36	Calibrated Balancing Valve	11.26
12-1	Schematic Duct System Layout	12.3
12-2	Instruments Selected for a Specific Job	12.5
13-1	Sample Supply Air Duct (Part)	13.4
13-2	Typical Air Diffuser CFM Measurement	13.6
13-3	Measuring Exhaust Air Velocity on Lab Exhaust Hood with Sash Height	13.7
13-4	Example of Exhaust Hood Air Balance Label	13.8
13-5	Sample Dust Collection Exhaust System	13.9

FIGURES (continued)

14-1	Typical Variable Air Volume (VAV) System	14.1
14-2	Open Loop Fan Volume Control	14.2
14-3	Closed Loop Fan Volume Control	14.3
14-4	Fan and System Curves, Constant Speed Fan	14.4
14-5	Fan and System Curves, Variable Speed Fan	14.4
14-6	Series Fan Powered VAV Unit	14.9
14-7	Parallel Fan Powered VAV Unit	14.9
14-8	Paper Strip at VAV Box Return Before Balancing	14.9
14-9	Paper Strip at VAV Box After Balancing	14.10
14-10	Constant Fan VAV Box	14.12
14-11	Intermittent Fan VAV Box (Parallel) Cycle	14.13
14-12	Multi-zone System	14.14
14-13	Dual Duct System	14.15
14-14	Induction Unit System	14.16
15-1	Hydronic Flow Measurement	15.1
15-2	External Ultrasonic Flow Sensor on Pipe with Insulation Removed	15.2
15-3	Ultrasonic Flow Meter	15.2
15-4	Effects of Flow Variation on Heat Transfer 20°F (11°C) Δt at 200°F (93°C)	15.9
15-5	Percent Variation to Maintain 90% Terminal Heat Transfer	15.9
15-6	Chilled Water Terminal Flow Versus Heat Transfer	15.10
15-7	Pump With Variable Speed Drive	15.11
15-8	Example of Primary and Secondary Pumping Circuits	15.12
15-9	Summer-Winter Systems	15.13
A-1	Duct Friction Loss Chart (I-P)	A.1
A-2	Duct Friction Loss Chart (SI)	A.2
A-3	Duct Friction Loss Correction Factors	A.4
A-4	Velocities/Velocity Pressures (I-P)	A.9
A-5	Air Density Friction Chart Correction Factors	A.11
A-6	Louver Velocity	A.12
A-7	Elbow Equivalents of Tees at Various Flow Conditions	A.43
