INTRODUCTION

This Master Index was developed to provide SMACNA members and design professionals with a centralized resource of SMACNA technical documents. It includes key words or phrases from 28 SMACNA technical manuals or guides.

The index was designed to be user-friendly by enabling contractors and design professionals to determine at a glance which SMACNA publications cover, for example, “Systems.” By turning to the word “Systems” in the Index, the user can identify SMACNA publications by specific section of a manual or guide. In the case of “Systems,” there are over 10 manuals which cover the topic.

Although abbreviations for each manual or guide are referenced at the bottom of each page, the following is a list of the SMACNA manuals or guides referenced throughout the Master Index:

<table>

The Master Index will be updated and published electronically as new or revised technical publications become available.

You may order SMACNA technical publications using your American Express, VISA, or MasterCard by calling (703) 803-2980.
FOREWORD

Development and publication of the Index was necessitated by the continuing evolution of SMACNA's technical services in design and construction standards or guidelines for sheet metal construction.

SMACNA's technical activities remain one of the foundations of strength and service to SMACNA members and the construction industry. There are currently seven contractor-composed technical committees or task forces active in developing and publishing design and construction standards. The talents and resources of 50 committee or task force members—representatives of SMACNA member firms—participate in the following technical committees or task forces:

- Technical Resources Committee
- Fire, Smoke & Radiation Damper Task Force
- Architectural Sheet Metal Task Force
- Spiral, Round & Flat Oval Duct Task Force
- Double-Wall Duct Task Force
- Rectangular Industrial Duct Construction Task Force
- HVAC Duct Construction Standards Task Force
- HVAC Systems Duct Design Task Force

In addition to the technical committee activity and publications, SMACNA sponsors or co-sponsors technical research in all areas of sheet metal construction. SMACNA also maintains strong liaison with other standard setting organizations such as ASHRAE, CSI, NFPA, NAIMA, etc.

Through a combination of a commitment to quality in the design and construction process and increasing liaisons with other industry organizations, it is SMACNA's objective to continue to be the premier sheet metal industry trade association.
A Scale, APP 15.1
A.I.S.I., DCS 4.6; MGW 5.10
Abrasion, IDC 53; RNDC 2.3, 4.2, 4.5, 4.6, 5.4, 5.5, 5.6, 6.1, 6.3, 6.4, 6.7, 7.1, 7.2, 7.3, 7.5, 7.6, 7.13, 7.14, 7.17, 7.21, 7.27, 7.28, 8.1, 8.55, 9.2, 15.1, 15.42, 16.1, 16.5, 17.12, 17.15
